Mr. Shaw (shawt@d-e.org)

What Good Researchers Do...

- Apply what they already know to their research topic.
- Distinguish valuable sources of information.
- Can quickly identify information sources that match their reading level and their level of background knowledge on a topic.
- Evaluate the validity of information.
- Design, craft, refine a clear research question.
- Identify gaps in the information collected. Articulate what is still unknown.
- Have a sense of when they have done a complete (or adequate) job of searching.
